

MLA-MP2\_NFI-16\_r

This is a grayscale micrograph of a biological specimen, possibly a cross-section of a plant or animal tissue. The specimen is irregularly shaped and has a dark, textured outer boundary. Inside, there is a large, light-colored, somewhat triangular region. Two blue dots are placed on this light region, each with a corresponding label in a white box. The top-left dot is labeled 'MLA-MP2\_NFI-16\_r' and the bottom-right dot is labeled 'MLA-MP2\_NFI-16\_c'. To the left of the main light region, there are several small, rounded, light-colored structures. A scale bar in the bottom-left corner indicates a length of 100 μm.
